

## SECLAB in the Gartner Hype Cycle for CPS Security 2026

Seclab is proud to be **recognized, for the second consecutive year, as a Sample Vendor** in the Gartner® Hype Cycle™ for CPS Security 2026 (CPS = Cyber-Physical System).

Hype Cycle for CPS Security 2026, Gartner

This year, we are **cited in 3 categories**:

- **CPS Network Cloaking and Segmentation**
- **CPS Unidirectional Gateways**
- **CPS Removable Media Security**

For us, these 3 mentions illustrate the relevance and defense-in-depth capabilities of the Seclab Xcore Platform, our OT cybersecurity platform. The breadth of our offering allows us to be identified among the key players for the protection of industrial and operational environments.

On these 3 categories, only two European players are listed, making Seclab a **credible and trusted alternative** to non-European solutions.

## Recommendations aligned with the principles of the Seclab Xcore Platform

In this Hype Cycle, Gartner recommends applying the following security measures, in perfect alignment with the approach of our OT cybersecurity platform:

1. Deploy a solution to discover all OT assets and gain visibility into existing network topologies ([Seclab Xplore](#)).
2. Define security zones around business processes based on criticality, safety, risk profiles and operational constraints ([Seclab Xplore](#)).
3. Use segmentation technologies to create isolated network segments, control traffic between zones and make OT assets invisible ([Seclab Xchange](#)).
4. Apply the principle of least privilege to restrict access to a minimum ([Seclab Xchange](#)).
5. Deploy removable media security solutions where necessary to ensure safe use of such media ([Seclab Xport](#)).
6. Monitor traffic between zones and enable detection of suspicious activity ([Seclab Xplore](#)).

## A tangible business opportunity

These 3 categories have moved past the uncertainty phase associated with initial hype and disillusionment. They are entering the phase of enlightenment and maturity. In this phase, buyers no longer speculate, they decide. This is a strategic window of opportunity: early adopters have validated the value, implementation risks are under control, and organizations that act now secure a competitive advantage before the technology becomes a market standard.

Gartner qualifies the related products as «Early Mainstream» with a penetration rate of between 20% and 50% for their target market. There is therefore real business potential to capture together.

To discover, or rediscover, the Seclab XCore Platform, don't hesitate to contact your Seclab Sales Representative.

The **Hype Cycle™ for CPS Security** is an annual report published by Gartner® that maps the maturity and adoption of technologies, methods and cybersecurity concepts applied to cyber-physical systems (CPS), including OT/ICS environments, industrial IoT, critical infrastructure and connected medical systems.

It allows cybersecurity leaders to identify the stage of evolution of market solutions in order to prioritize their investments and align their operational security strategy with real industry trends.
