

STAYING ALIVE

Because we've all have something vital to preserve.

Long considered a sanctuary thanks to their physical isolation, **operational and critical systems are now under threat**. The explosion in their connectivity, combined with the potentially severe impact of disruption, has turned these systems into prime targets for cyberattackers. And unfortunately, in the industrial world, cybersecurity solutions designed for IT often fall short.

A genuine alternative to American, Israeli, or Asian technologies, Seclab delivers a **sovereign solution, built for the real-world constraints of OT**.

About Us

Founded over ten years ago to protect the most sensitive infrastructures (nuclear, military, rail, space), Seclab built its expertise in environments where security allows no compromise.

Since 2024, a new leadership team has been accelerating the company's growth with a clear mission: to help every industrial or sensitive organization ensure business continuity and safeguard what is vital for their customers and the public.

Born from the merger with Seckiot, the Seclab Xcore Platform brings together the full range of defense-in-depth capabilities for industrial systems.

Its positioning is radical: where IT tools transposed to OT create friction, false positives, and operational disruption, Seclab delivers lasting protection without getting in the way.

They Trust Us

The challenges Seclab solves

Continuity risk: 40% of OT incidents cause a shutdown. The operational and financial impacts are significant.

Regulatory compliance: NIS2 and IEC 62443 require exhaustive mapping, flow traceability, and IT/OT segmentation.

Zero-day exposure: software-based protection equipment remains vulnerable or permeable to unknown attacks.

Intrusive IT solutions: false positives, disrupted operations, maintenance overhead, ill-suited systems. IT cyber solutions simply aren't built for OT.

Limited visibility: shadow assets, unreferenced flows, poorly documented networks. Knowledge of OT infrastructure is often insufficient.

IT/OT collaboration: operational and IT teams lack tools suited to the needs of both worlds.

DISCOVER - ISOLATE - DETECT

Seclab Xcore Platform is the only OT-dedicated cybersecurity platform that combines **visibility, protection, and AI-augmented attack detection.**

It guides every organization through a progressive, structured journey to greater cyber maturity, built around identifying vital assets, isolating them with maximum-level security, and monitoring the infrastructure, especially in non-isolated zones. **Even in the event of an attack, what matters most is preserved, and everything can start back up.**

DISCOVER & DETECT with Seclab Xplore

- Non-intrusive OT discovery
- Most comprehensive OT mapping on the market
- Multiple views (Logical, Geographic, Purdue, Network)
- Audit or supervision mode
- AI-powered threat and anomaly detection

ISOLATE with Seclab Xchange

- Secure network isolation with patented Electronic AirGap
- Protocol Break
- Low-latency bidirectional flows
- File and application filtering
- Immune to zero-day attacks
- Zero patching effort
- Zero-Trust administration

ISOLATE with Seclab Xport and Xlocker

- Secure USB isolation with patented Electronic AirGap
- Bulletproof USB protection
- File filtering and integrity control
- Remotely managed physical port blocking, with tamper alert
- No software installation

“Every day, we work alongside our clients to build an industry that is safer, more resilient, and future-ready.”
